· github.com/zohaibkhan745

Third-year Software Engineering student at GIKI with hands-on experience building and shipping full-stack products used by real users. Ranked **13th nationally at ICPC Asia Regional 2025**. Comfortable across the stack — from REST APIs to React frontends. Eager to contribute to real projects in an Agile team environment.

Education

Ghulam Ishaq Khan Institute (GIKI) BS Software Engineering CGPA: 3.3/4.0 Sep 2023 – Jun 2027
Relevant Coursework: Data Structures & Algorithms · Object-Oriented Programming · Database Systems · Artificial Intelligence
· Devops · Discrete Mathematics · Web Engineering · Design and Analysis of Algorithm · Software Requirement Engineering · Computer Networks

Honors & Awards

- **ICPC Asia Regional (2025):** Ranked **13th in Pakistan** in the nation’s premier competitive programming contest — solved complex algorithmic problems under strict time constraints.
- **GIKI Merit Scholarship (2023–Present):** Fully funded scholarship (PKR 4M+) awarded on entrance merit; maintained through continued academic excellence.
- **Dean’s Honor List (Fall 2024):** Recognized for top-tier academic performance during the semester.
- **1st Place, Intra-Faculty Chess Competition (2025):** Won among 200+ participants — demonstrates analytical thinking and composure under pressure.

Technical Skills

Python, C/C++, JavaScript, SQL, HTML, CSS Languages
React, Node.js, FastAPI, Django, PyTorch, Scikit-Learn, REST APIs Frameworks
Git, GitHub, Docker, Linux, VS Code, Jupyter Notebook, Jira, PostgreSQL
Tools
Concepts DSA, OOP, Agile/Scrum, Software Requirement Engineering, Machine Learning, CI/CD (basics)

Experience

The BookClub Founder & Lead Software Engineer Topi, Pakistan Nov 2025 – Present
GIKI Student Initiative · [Live Demo](#) · [GitHub](#)
– Built and deployed a full-stack P2P textbook exchange platform serving **500+ GIKI students**, handling hundreds of weekly transactions.
– Architected backend REST APIs using **FastAPI (Python)** and built a responsive frontend with **React + Vite**.
– Owned the complete product lifecycle: requirement gathering, system design, development, testing, and production deployment.
– Applied Git version control, modular architecture, and **Agile-style** iterative development with regular user feedback cycles.
– Designed and optimized PostgreSQL schema for concurrent read/write performance under active student load.

Projects

AI Fit & Try — Virtual Try-On System Python · PyTorch · OpenCV
[Live Demo](#) · [GitHub](#)
– Built a deep learning pipeline for virtual garment try-on using body segmentation and mask-based post-processing.
– Improved output quality through iterative user testing and debugging model edge cases on real-world input images. – Designed preprocessing pipeline to handle noisy images with varying lighting and backgrounds.

Flood Detection System Python · Scikit-Learn · Pandas

[GitHub](#)

- Trained Random Forest and Logistic Regression models on regional environmental data for flood-risk prediction. – Performed end-to-end ML pipeline: preprocessing, feature engineering, cross-validation, and evaluation metrics.

Mess Management System

Node.js · PostgreSQL · JavaScript

[GitHub](#)

- Designed normalized relational schema and built RESTful CRUD APIs for high-volume institutional data management. – Wrote formal SRS document and applied database normalization and query optimization for data integrity.

Leadership & Extracurriculars

- **Nexus Society (GIKI):** Organized national-level student and technology events.
- **AIFS Society (GIKI):** Contributed to AI-focused workshops and hackathon organization.
- **Project Topi:** Volunteered in community welfare initiatives and flood relief campaigns in Upper Dir.
- **Cricket & Chess:** Played cricket at district level; ranked 1st in GIKI chess competition — consistent performance under competitive pressure.
